

Computer Vision - Lecture 1

Introduction

22.10.2015

Bastian Leibe

Visual Computing Institute

RWTH Aachen University

<http://www.vision.rwth-aachen.de/>

leibe@vision.rwth-aachen.de

Organization

- **Lecturer**
 - Prof. Bastian Leibe (leibe@vision.rwth-aachen.de)
- **Teaching Assistant**
 - Stefan Breuers (breuers@vision.rwth-aachen.de)
- **Course webpage**
 - <http://www.vision.rwth-aachen.de/teaching/>
→ Computer Vision
 - Slides will be made available on the webpage
 - There is also an L2P electronic repository
- **Please subscribe to the lecture on the Campus system!**
 - Important to get email announcements and L2P access!

Language

- **Official course language will be English**
 - If at least one English-speaking student is present.
 - If not... you can choose.
- **However...**
 - Please tell me when I'm talking too fast or when I should repeat something in German for better understanding!
 - You may at any time ask questions in German!
 - You may turn in your exercises in German.
 - You may answer exam questions in German.

Organization

- **Structure: 3V (lecture) + 1Ü (exercises)**
 - 6 EECS credits
 - Part of the area “Applied Computer Science”
- **Place & Time**
 - **Lecture:** Tue 14:15 - 15:45 UMIC 025
 - **Lecture/Exercises:** Thu 14:15 - 15:45 UMIC 025
- **Exam**
 - **Written exam**
 - **1st try date:** Mon, 29.02., 13:30 - 17:30
 - **2nd try date:** Thu, 31.03., 09:30 - 12:30

Exercises and Demos

- Exercises

- Typically 1 exercise sheet every 2 weeks (Matlab based)
- Hands-on experience with the algorithms from the lecture.
- Send in your solutions the night before the exercise class.
- No admission requirement to qualify for the exam this year!

- Teams are encouraged!

- You can form teams of up to 3 people for the exercises.
- Each team should only turn in one solution.
- But list the names of all team members in the submission.

Course Webpage

Tentative Schedule

Date	Topic	Content	Slides	Related Material
20.10.15	<i>no class</i>	-		
22.10.15	Introduction	Why vision? Applications, Challenges, Image Formation	pdf, fullpage	
27.10.15	Image Processing I	Binary Images, Thresholding, Morphology, Connected Components, Region Descriptors		
29.10.15	Exercise 1	Intro Matlab		Matlab resources
03.11.15	Image Processing II	Linear Filters, Gaussian Smoothing, Median Filter		F&P Chapter 7
05.11.15	Edge Detection	Multi-scale Representations, Image Derivatives, Edge Detection		F&P Chapter 8
10.11.15	Structure Extraction	Chamfer Matching, Line Fitting, Hough Transform, Gen. Hough Transform		B&B on the Generalized HT, Hough Transform demo (Java)
12.11.15	Segmentation I	Segmentation as Clustering, k-means, EM, Mean-Shift		F&P chapter 14
17.11.15	Exercise 2	Thresholding, Morphology, Derivatives, Edges		
19.11.15	Segmentation II	Segmentation as Energy Minimization, (Markov Random Fields, Graph Cuts)		Graph Cuts paper, Graph Cuts code
24.11.15	Recognition I	Global Descriptors, Histograms, Histogram Comparison, Multidim. Histograms		

Thursday: Matlab tutorial

<http://www.vision.rwth-aachen.de/teaching/>

Textbooks

- No single textbook for the class.
- Basic material is covered in the following two books.

D. Forsyth, J. Ponce
Computer Vision - A Modern Approach
Prentice Hall, 2002

(available in the library's "Handapparat")

R. Hartley, A. Zisserman
Multiple View Geometry in Computer Vision
2nd Ed., Cambridge Univ. Press, 2004

- Additional material will be given out for some topics.
 - Tutorials and deeper introductions.
 - Application papers

How to Find Us

- **Office:**

- UMIC Research Centre
- Mies-van-der-Rohe-Strasse 15, room 124

- **Office hours**

- If you have questions to the lecture, come to us.
- My regular office hours will be announced (additional slots are available upon request)
- Send us an email before to confirm a time slot.

Questions are welcome!

Topics of Today's Lecture

- What is computer vision?
- What does it mean to see and how do we do it?
- How can we make this computational?

- First Topic: Image Formation
 - Details in Forsyth & Ponce, chapter 1.

Why Computer Vision?

**Cameras are
all around us...**

Images and video are everywhere...

Personal photo albums

Movies, news, sports

Internet services

Surveillance and security

Mobile and consumer
applications

Medical and scientific images

What is Computer Vision?

- **Goal of Computer Vision**
 - *Enable a machine to “**understand**” images and videos*
- **Automatic understanding**
 - **Computing properties of the 3D world from visual data**
(measurement)
 - **Algorithms and representations to allow a machine to recognize objects, people, scenes, and activities.** *(perception and interpretation)*

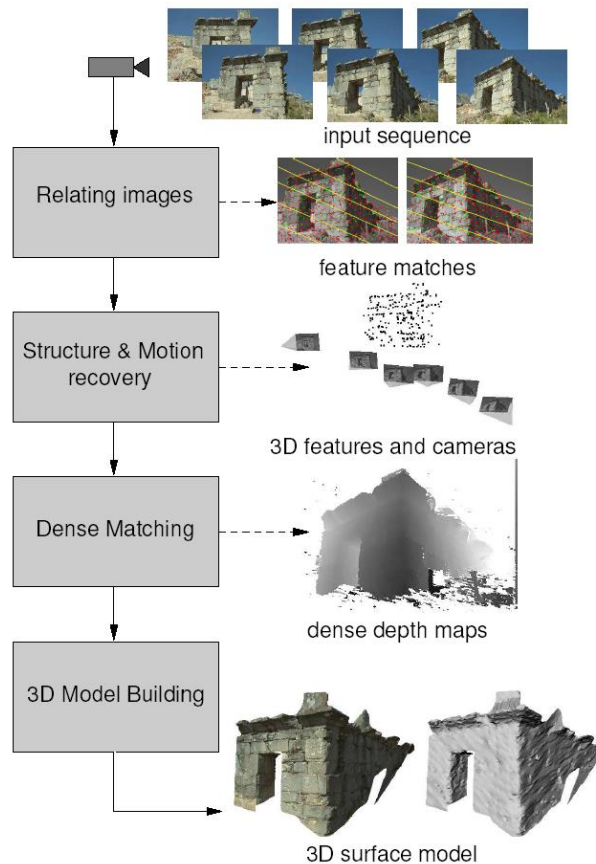

Vision for Measurement

Real-time stereo

Pollefeys et al.

Structure from motion

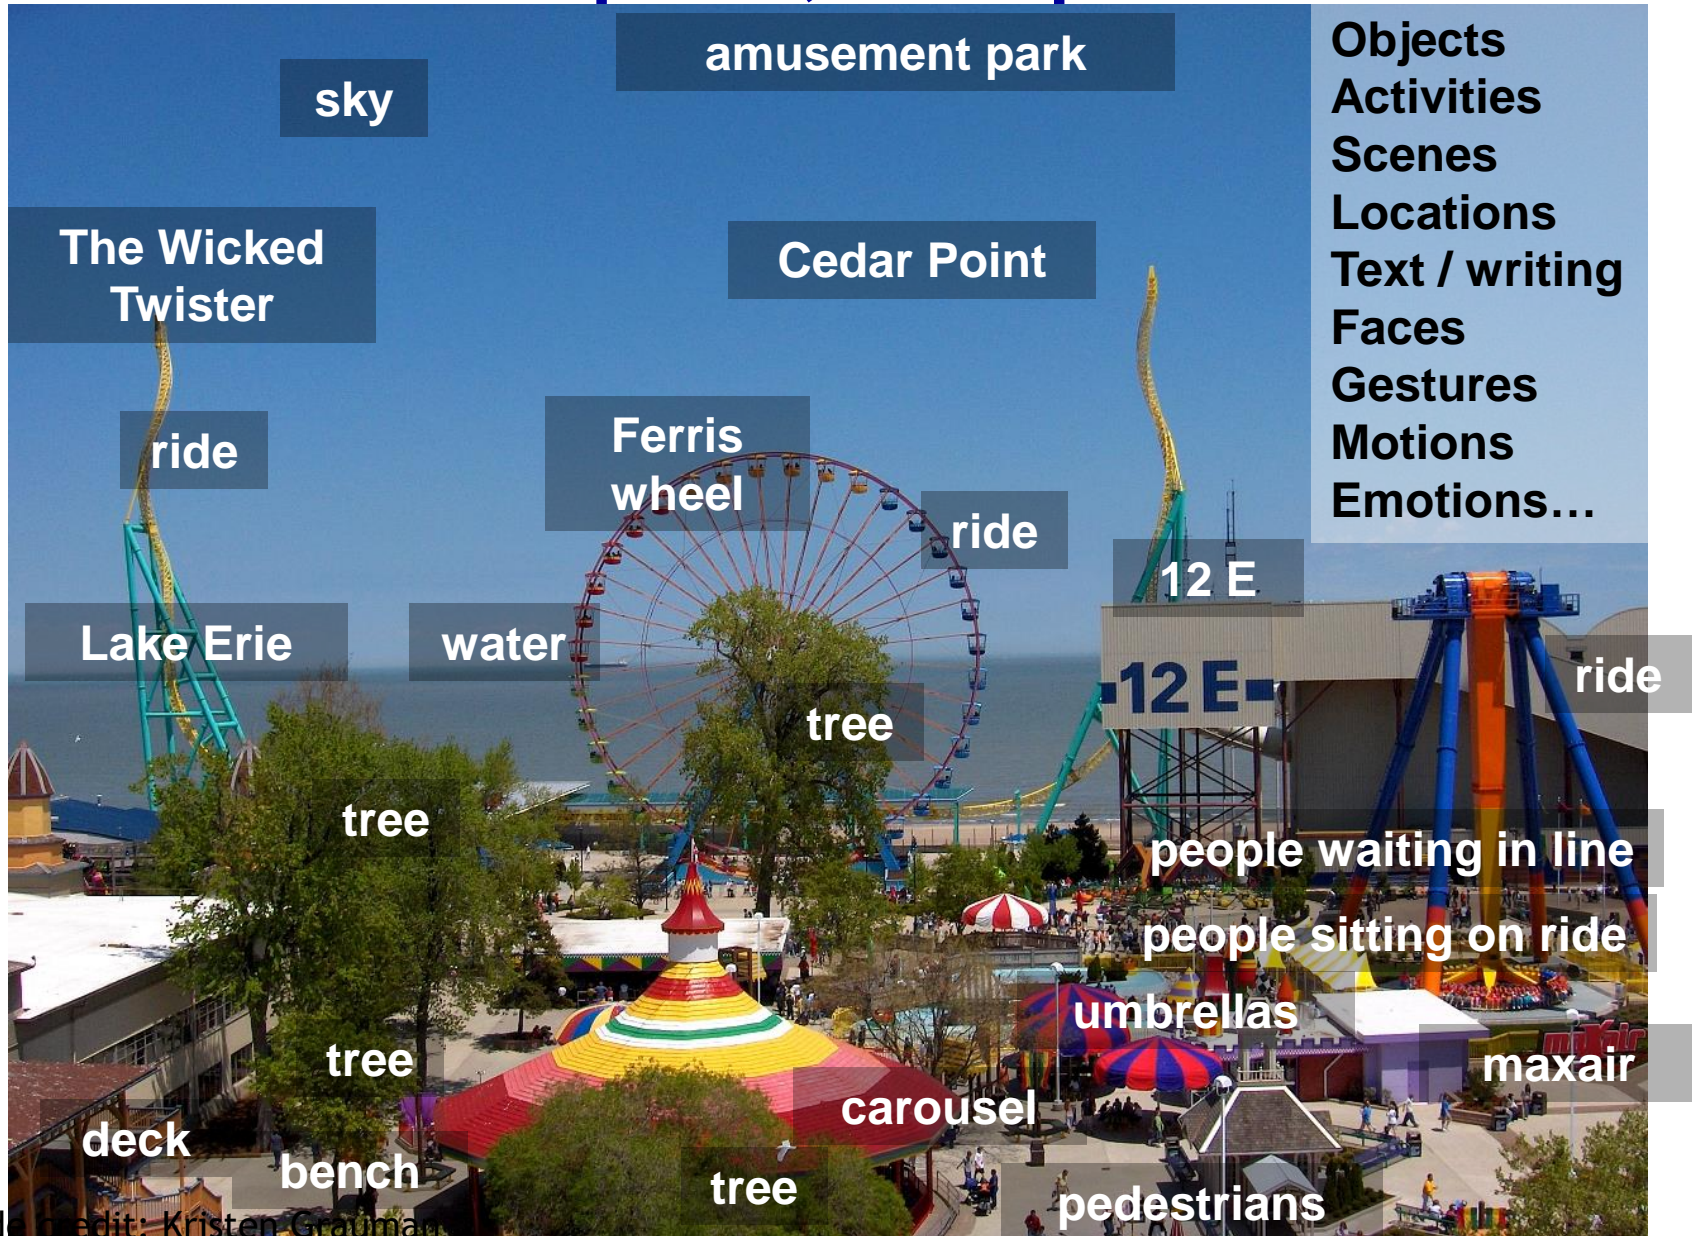

Multi-view stereo for community photo collections

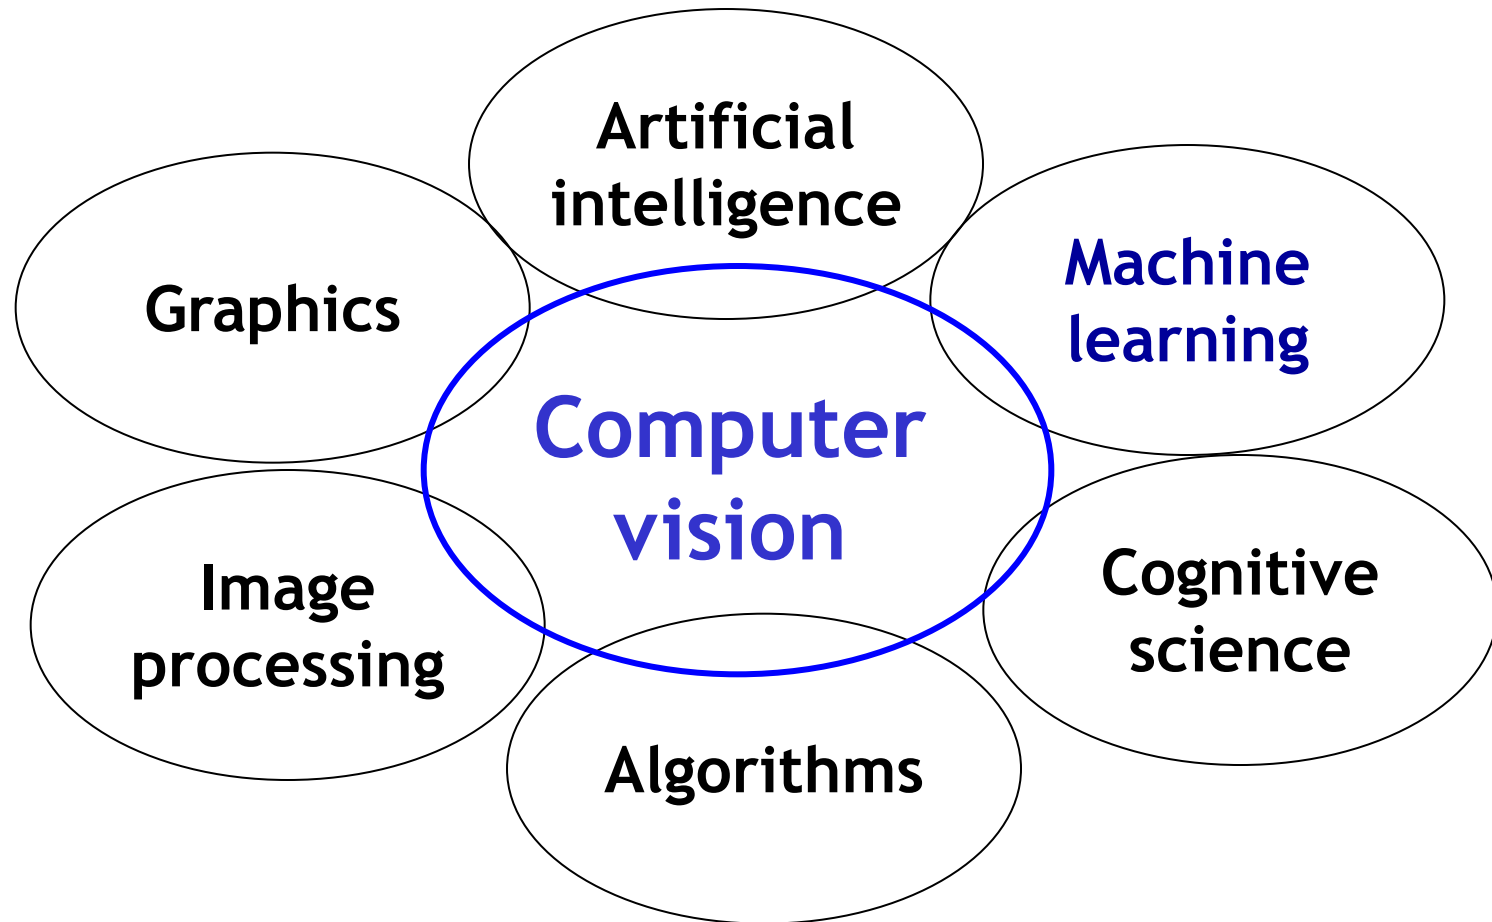

Goesele et al.

Vision for Perception, Interpretation

Objects
Activities
Scenes
Locations
Text / writing
Faces
Gestures
Motions
Emotions...

Related Disciplines

Directions to Computer Vision

- **Science**
 - Foundations of perception. How do WE see?
- **Engineering**
 - How do we build systems that perceive the world?
- **Many applications**
 - Medical imaging, surveillance, entertainment, graphics, ...

Applications: Faces and Digital Cameras

Setting camera focus
via face detection

Camera waits for everyone to
smile to take a photo [Canon]

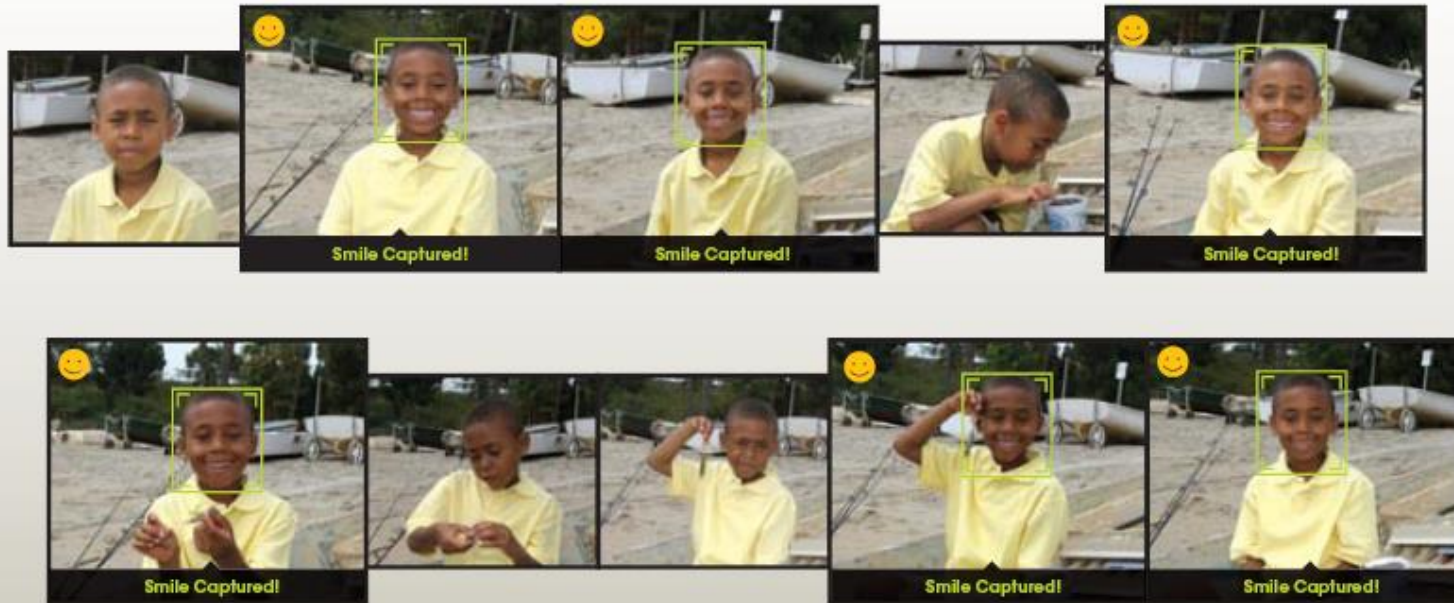

Automatic lighting
correction based
on face detection

Smile detection

The Smile Shutter flow

Imagine a camera smart enough to catch every smile! In Smile Shutter Mode, your Cyber-shot® camera can automatically trip the shutter at just the right instant to catch the perfect expression.

[Sony Cyber-shot® T70 Digital Still Camera](#)

Segmentation

- Automatic background removal from images
 - Functionality is included in Microsoft Office 2010...

Matching

- Stitch your photos together to create panoramas

AUTOSTITCH

Applications: Vision for Mobile Phones

Google Goggles in Action

Click the icons below to see the different ways Google Goggles can be used.

- Take photos of objects as queries for visual search

Applications: Vision-based Interfaces

**Games
(Microsoft Kinect)**

**Assistive technology systems
Camera Mouse
Boston College**

Applications: Medical & Neuroimaging

Image guided surgery
MIT AI Vision Group

fMRI data
Golland et al.

Applications: Visual Special Effects

The Matrix

MoCap for *Pirates of the Caribbean*, Industrial Light and Magic

(Source: S. Seitz)

Applications: Safety & Security

Autonomous robots

Driver assistance

**Monitoring pools
(Poseidon)**

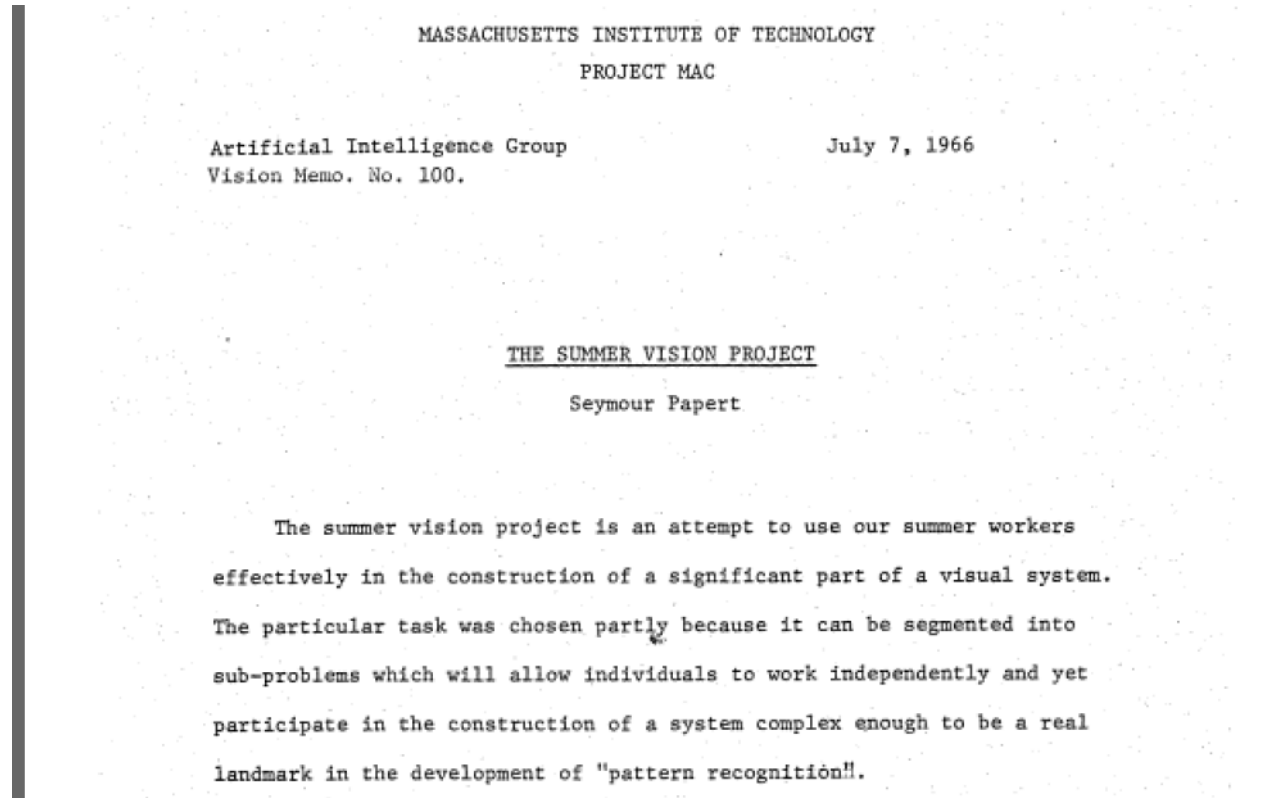

Pedestrian detection
[MERL, Viola et al.]

Surveillance

Ok, Let's Do It - Any Obstacles?

- 1966: Seymour Papert directs an undergraduate student to solve "the problem of computer vision" as a summer project.

- Obviously, computer vision was too difficult for that...

Challenges: Many Nuisance Parameters

Illumination

Object pose

Clutter

Occlusions

**Intra-class
appearance**

Viewpoint

Challenges: Intra-Category Variation

Slide credit: Fergus, FeiFei, Torralba

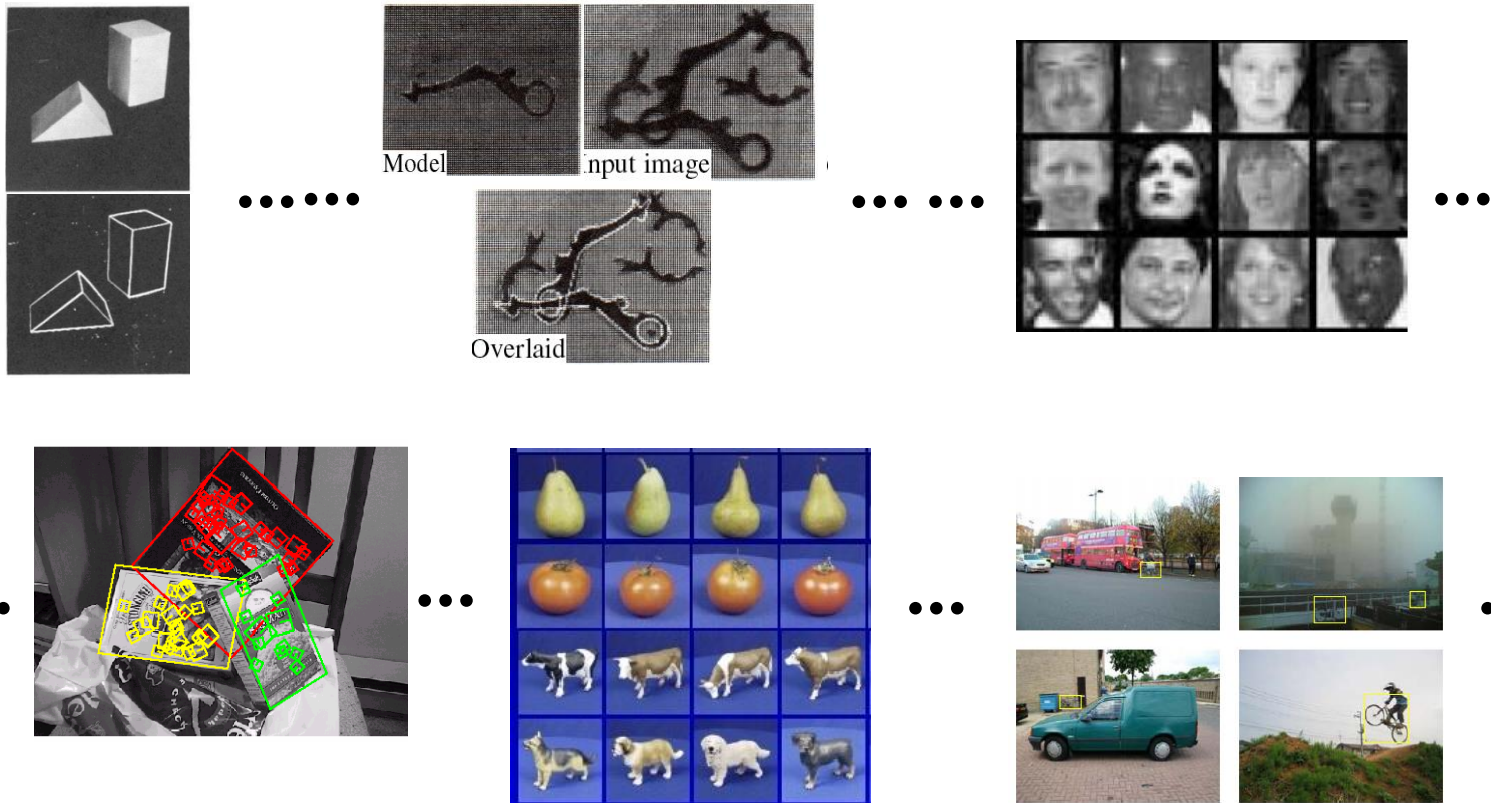

B. Leibe

Challenges: Complexity

- Thousands to millions of pixels in an image
- 3,000-30,000 human recognizable object categories
- 30+ degrees of freedom in the pose of articulated objects (humans)
- Billions of images indexed by Google Image Search
- 18 billion+ prints produced from digital camera images in 2004
- 295.5 million camera phones sold in 2005
- About half of the cerebral cortex in primates is devoted to processing visual information [Felleman and van Essen 1991].

So, Should We Give Up?

- NO! Very active research area with exciting progress!

Things Are Starting to Work...

- Computer Vision in realistic scenarios is becoming feasible!

Course Outline

- Image Processing Basics
- Segmentation
- Local Features & Matching
- Object Recognition and Categorization
- 3D Reconstruction
- Motion and Optical Flow

Topics of Today's Lecture

- What is computer vision?
- What does it mean to see and how do we do it?
- How can we make this computational?
- **First Topic: Image Formation**
 - Details in Forsyth & Ponce, chapter 1.

Camera Obscura

- Around 1519, Leonardo da Vinci (1452 - 1519)
 - “When images of illuminated objects ... penetrate through a small hole into a very dark room ... you will see [on the opposite wall] these objects in their proper form and color, reduced in size ... in a reversed position owing to the intersection of the rays”

Camera Obscura

- Used by artists (e.g. Vermeer 17th century) and scientists

Camera Obscura

LOCATED IN CENTRAL PARK,
representing a
PERFECT LIVING PICTURE
OF ALL
SURROUNDING OBJECTS.
*An Elegant Appendage to
Gentlemen's Mansions, Parks &c.*

Jetty at Margate England, 1898.

An attraction in the late 19th century

Pinhole Camera

- (Simple) standard and abstract model today
 - Box with a small hole in it
 - Works in practice

Pinhole Size / Aperture

- Pinhole too big - many directions are averaged, blurring the image
- Pinhole too small - diffraction effects blur the image
- Generally, pinhole cameras are *dark*, because a very small set of rays from a particular point hits the screen.

The Reason for Lenses

- Keep the image in sharp focus while gathering light from a large area

The Thin Lens

$$\frac{1}{z'} - \frac{1}{z} = \frac{1}{f}$$

Focus and Depth of Field

“circles of confusion”

Thin lens: scene points at distinct depths come in focus at different image planes.

(Real camera lens systems have greater depth of field.)

- Depth of field: distance between image planes where blur is tolerable

Focus and Depth of Field

- How does the aperture affect the depth of field?

- A smaller aperture increases the range in which the object is approximately in focus

Application: Depth from (De-)Focus

Images from
same point of view,
different
camera
parameters

3D Shape /
depth
estimates

Field of View

28 mm lens, $65.5^\circ \times 46.4^\circ$

50 mm lens, $39.6^\circ \times 27.0^\circ$

70 mm lens, $28.9^\circ \times 19.5^\circ$

210 mm lens, $9.8^\circ \times 6.5^\circ$

- Angular measure of the portion of 3D space seen by the camera

Field of View Depends on Focal Length

- As f gets smaller, image becomes more *wide angle*
 - More world points project onto the finite image plane
- As f gets larger, image becomes more *telescopic*
 - Smaller part of the world projects onto the finite image plane

Digital Images

- Film is replaced by a sensor array
- Current technology: arrays of *charge coupled devices* (CCD)
- *Discretize* the image into pixels
- *Quantize* light intensities into pixel values.

Resolution

- Sensor: size of real world scene element that images to a single pixel
- Image: number of pixels
- Influences what analysis is feasible, affects best representation choice

Color Sensing in Digital Cameras

Bayer grid

Estimate missing components from neighboring values (demosaicing)

Grayscale Image

• Problem of Computer Vision

- How can we recognize fruits from an array of (gray-scale) numbers?
- How can we perceive depth from an array of (gray-scale) numbers?
- ...

- How do we humans do it? How can we make a computer do it?

Next Lectures

- First few lectures: low-level vision
 - Binary image processing
 - Filtering operations
 - Edge and structure extraction
 - Color
 - Segmentation and grouping
- Next week: Binary image processing

- Tuesday 21.10.: *Exercise 1*
 - Intro Matlab, basic image operations

Questions ?
