

Computer Vision 2 WS 2018/19

Part 18 – CNNs for Video Analysis III 23.01.2019

Guest Lecture: M.Sc. Jonathon Luiten

RWTH Aachen University, Computer Vision Group
<http://www.vision.rwth-aachen.de>

Course Outline

- Single-Object Tracking
- Bayesian Filtering
- Multi-Object Tracking
- Visual Odometry
- Visual SLAM & 3D Reconstruction
 - Online SLAM methods
 - Full SLAM methods
- Deep Learning for Video Analysis
 - CNNs for video analysis
 - CNNs for motion estimation
 - Video object segmentation

2

Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 18 – CNNs for Video Analysis III

Topics of This Lecture

- Video Object Segmentation (VOS)
 - First-frame fine-tuning
 - Online Adaptation
 - Mask Refinement
 - Optical Flow Mask Propagation
 - Data Augmentation
 - Object Appearance Re-Identification
 - Proposal Generation
 - Further Approaches
- Multi-object Tracking and Segmentation (MOTS)
 - The future of segmentation based tracking

3

Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 18 – CNNs for Video Analysis III

Exciting Progress in Semantic Segmentation: 2017

- Full-Resolution Residual Network (FRRN) [CVPR'17]
 - Single-frame processing results

4

Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 18 – CNNs for Video Analysis III
[Pohlen, Hermans, Mathias, Leibe, CVPR'17]

Video Object Segmentation

- Generating **accurate** and **consistent pixel-masks** for **objects** in a **video** sequence

5

Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 18 – CNNs for Video Analysis III

Video Object Segmentation

6

Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 18 – CNNs for Video Analysis III

Video Object Segmentation – Task Formulation

Given: First-frame ground truth Goal: Complete video segmentation

- Task formulation
 - Given: segmentation mask of target object(s) in the first frame
 - Goal: pixel-accurate segmentation of entire video
 - Currently a major testing ground for segmentation-based tracking

7 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Other fields related to VOS

Semantic Segmentation Person re-identification Optical flow estimation

8 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

VOS Datasets

DAVIS 2016 (30/20, single objects, first frames) DAVIS 2017 (60/90, multiple objects, first frames) YouTube-VOS 2018 (3471/982, multiple objects, first frame where object appears)

9 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Topics of This Lecture

- Video Object Segmentation (VOS)
 - First-frame fine-tuning
 - Online Adaptation
 - Mask Refinement
 - Optical Flow Mask Propagation
 - Data Augmentation
 - Object Appearance Re-Identification
 - Proposal Generation
 - Further Approaches
- Multi-object Tracking and Segmentation (MOTS)
 - The future of segmentation based tracking

10 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

First-frame fine-tuning

- Idea
 - Semantic segmentation of one object (foreground) from background.
 - First-frame adaptation to specific object-of-interest using fine-tuning.
 - Pre-training for 'objectness'.

11 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

OSVOS [Caelles et al. CVPR2017]

1 Base Network (pre-trained on ImageNet) 2 Parent Network (based on OSVOS pre-training) 3 Test Network (fine-tuned on object-of-interest)

12 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

OSVOS-S [Maninis et al. PAMI18]

13 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Topics of This Lecture

- Video Object Segmentation (VOS)
 - First-frame fine-tuning
 - [Online Adaptation](#)
 - Mask Refinement
 - Optical Flow Mask Propagation
 - Data Augmentation
 - Object Appearance Re-Identification
 - Proposal Generation
 - Further Approaches
- Multi-object Tracking and Segmentation (MOTS)
 - The future of segmentation based tracking

14 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Online Adaptation

- Idea
 - adapt model to appearance changes every frame – not just in the first frame.
 - Iteratively fine-tune the model on previous prediction every frame.
 - Extremely slow.

– You can think of this as a Deep Learning version of *Tracking by Online Classification* (Lecture 5)...

15 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

OnAVOS [Voigtlaender et al. BMVC17]

16 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Topics of This Lecture

- Video Object Segmentation (VOS)
 - First-frame fine-tuning
 - Online Adaptation
 - [Mask Refinement](#)
 - Optical Flow Mask Propagation
 - Data Augmentation
 - Object Appearance Re-Identification
 - Proposal Generation
 - Further Approaches
- Multi-object Tracking and Segmentation (MOTS)
 - The future of segmentation based tracking

17 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Mask Refinement

- Idea
 - We can often start with an approximate mask (either from previous frame or from coarse estimate).
 - Use a refinement network to accurately refine the mask estimate.
 - This can take advantage of crop-and-zoom to do segmentation at a higher resolution.

18 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

MaskTrack [Perazzi et al. CVPR17]

Input frame t

Mask estimate $t-1$

Refined mask t

19 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Topics of This Lecture

- Video Object Segmentation (VOS)
 - First-frame fine-tuning
 - Online Adaptation
 - Mask Refinement
 - Optical Flow Mask Propagation
 - Data Augmentation
 - Object Appearance Re-Identification
 - Proposal Generation
 - Further Approaches
- Multi-object Tracking and Segmentation (MOTS)
 - The future of segmentation based tracking

20 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Optical Flow Mask Propagation

- Idea
 - Optical Flow defines correspondences between the pixels in neighboring frames.
 - Using these correspondences we can determine pixels in one frame that corresponded to a mask in the previous frame.
 - This enables us to 'warp' the segmentation mask from one frame to the next.
 - This propagated mask isn't perfect, and further refinement helps.

21 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Topics of This Lecture

- Video Object Segmentation (VOS)
 - First-frame fine-tuning
 - Online Adaptation
 - Mask Refinement
 - Optical Flow Mask Propagation
 - Data Augmentation
 - Object Appearance Re-Identification
 - Proposal Generation
 - Further Approaches
- Multi-object Tracking and Segmentation (MOTS)
 - The future of segmentation based tracking

22 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

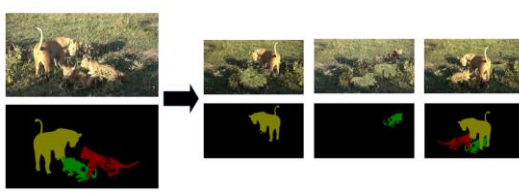

Data Augmentation

- Idea
 - Approaches based on fine-tuning networks on the given first frame masks work quite well – but often overfit to first frame appearance.
 - We can get around this by doing large-scale data augmentations.
 - We can crop out the objects-of-interest, fill in the background, and place objects back into the scene randomly with blending.

23 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Lucid Data Dreaming [Khoreva et al. CVPR17]

24 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Topics of This Lecture

- Video Object Segmentation (VOS)
 - First-frame fine-tuning
 - Online Adaptation
 - Mask Refinement
 - Optical Flow Mask Propagation
 - Data Augmentation
 - **Object Appearance Re-Identification**
 - Proposal Generation
 - Further Approaches
- Multi-object Tracking and Segmentation (MOTS)
 - The future of segmentation based tracking

25

Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2

RWTH AACHEN
UNIVERSITY

Object Appearance Re-Identification

- Idea
 - Often objects go in and out of view, or become extremely occluded.
 - In such situations, a mask-propagation based approach fails.
 - We need to re-identify objects based only on their appearance similarity.
 - We can use Siamese or Triplet Loss (see [Lecture 18](#)) based ReID networks to determine an appearance similarity score for object proposals.

UNIVERSITY

Proposal Generation

- Idea
 - Instance Segmentation Networks (E.g. Mask-RCNN) give excellent single image object instance segmentation proposal results.
 - One can approach video object segmentation as taking these proposals in each frame and then linking them over time using a merging algorithm.

29

Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

RWTH AACHEN
UNIVERSITY

PRemVOS [Luiten et al. ACCV18]

- An approach that combines all of the previous VOS principles and gives state-of-the-art results.
- Combines the following principles:
 - First-frame fine-tuning
 - Mask Refinement
 - Optical Flow Mask Propagation
 - Data Augmentation
 - Object Appearance Re-Identification
 - Proposal Generation

30

Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

RWTH AACHEN
UNIVERSITY

PRemVOS – Overview

Proposal generation Refinement Merging

- **Proposal generation**
 - Category-agnostic Mask R-CNN proposals
 - ResNet101 backbone, joint training on COCO and Mapillary
- **Refinement**
 - Fully-convolutional segmentation network trained to refine the segmentation given a proposal bounding box
 - DeepLabV3+ backbone

31 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III
[Luiten, Voigtlaender, Leibe, ACCV'18]

PRemVOS – Overview

Proposal generation Refinement Merging

- **Merging**
 - Greedy decision process, chooses proposal(s) with best score
 - Optional proposal expansion through Optical Flow propagation
 - Proposal score as combination of
 - Objectness score
 - Mask propagation IoU score (Optical Flow warping)
 - ReID score
 - Object-Object interaction scores

Lessons Learned

- **Challenge 1: How to generate proposals?**
 - Deep-learning based region proposal generators are fit for the task
 - Experimented with SharpMask and Mask R-CNN
- **Challenge 2: How to track region proposals?**
 - Region overlap works as a consistency measure
 - Optical flow based propagation really helps
 - ReID score also helpful
- **Open issues**
 - PRemVOS has no notion of 3D objects moving through 3D space.
 - Track initialization / termination logic needed for real tracking.
 - How to obtain the initial segmentation?

Topics of This Lecture

- **Video Object Segmentation (VOS)**
 - First-frame fine-tuning
 - Online Adaptation
 - Mask Refinement
 - Optical Flow Mask Propagation
 - Data Augmentation
 - Object Appearance Re-Identification
 - Proposal Generation
 - **Further Approaches**
- **Multi-object Tracking and Segmentation (MOTS)**
 - The future of segmentation based tracking

36 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Combining Mask Propagation and Re-ID

- Idea
 - Mask propagation networks give segmentation dependent on previous frame prediction.
 - Re-ID networks try to match the appearance of the 1st frame to the current frame.
 - We can combine both together by having input from the previous frame and the first frame and concatenating these together before decoding the output.

37 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

- Region Guided Mask Propagation

38 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Instance Embedding Vectors

- Idea
 - Re-Identification networks based on bounding-box region proposals work really well.
 - This idea can be extended to a Re-Identification embedding for every pixel.
 - This pixel-wise Re-ID embedding vectors can then be used to directly extract a mask by taking the pixel with an embedding similar to the first frame embeddings.

39 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Blazingly Fast [Chen et al. CVPR18]

40 Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Using Recurrent Neural Networks

- Idea
 - Most of the approaches use neural networks trained to output results based on either only the current frame, or maybe the previous and/or first frames.
 - Using recurrent neural networks we can directly train our neural networks to learn to produce the results based on the entire sequence of images in a video in an end-to-end manner.

43

Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

VOS -> MOTS

- Video Object Segmentation (VOS) is restricted in a number of ways.
 - First frame mask given
 - Short video clips with objects present in almost all frames
 - Few objects to track (max around 7 per video)
- Multi-Object Tracking and Segmentation (MOTS) is an extension of VOS that deals with all of these shortcomings.

44

Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

MOTS dataset

45

Visual Computing Institute | Prof. Dr. Bastian Leibe
Computer Vision 2
Part 19 – CNNs for Video Analysis III

Solving MOTS

- Idea
 - Very similar approach to PreMVOS.
 - Proposal-generation followed by merging using optical flow and Re-ID vector.
 - 3D Convolutions for temporally consistent object proposals.
 - Re-ID vector built into the proposal network.
 - New tracks started by confident proposals that don't match well to previous tracks.
